# INSTALLATION OF n8n IN COOLIFY DASHBOARD

STEP1:
1. Create a project with the name n8n.
2. Click on add resource, there in service search for n8n.

3. Choose n8n with postgresql, that is enough for our requirement.
4. If you click in that you can see pg that will ask for DB details, give that details and copy them, and also give domain(https://n8n.hinfinitys.com).
   NOTE: ignore the warnings while creating Domain.

5. Click on save.

6. Go to env variables and cross check db details, and also SERVICE_URL, make sure as they were as configured in before steps. Then click Save environment variables.

6.Click deploy. After success Deployment, use the domain name in the browser to access it.

7. Setup the credentials. That's it.
